FOR IMMEDIATE RELEASE

GIS'Abigeil Mc Intyre Named Recipient of The NAWASA Award for Outstanding Journalism in Water, Climate Change and Environmental Sustainability

St. George's, Grenada, April 15th, 2026 – The National Water and Sewerage Authority (NAWASA) is proud to announce that Abigeil Mc Intyre of the Government Information Service (GIS) is the recipient of the NAWASA Award for Outstanding Journalism in Water, Climate Change and Environmental Sustainability.

The award was presented at the recent Media Workers Association of Grenada (MWAG) Annual Media Awards, where NAWASA's Assistant Manager of Communications, Ms. Jamila Lewis, officially recognized Ms. Mc Intyre for her exceptional contribution to environmental journalism.

This award forms part of NAWASA's ongoing commitment to fostering informed public discourse on water security, climate resilience, and environmental stewardship across Grenada and the wider Caribbean. In an era of increasing climate uncertainty, the role of the media in delivering accurate, compelling, and solutions-driven reporting has never been more critical.

Beyond recognition, the award represents a meaningful investment in professional development. The recipient benefits from a $15,000 sponsorship toward a training opportunity, enabling continued growth and expanded impact in the field of journalism.

The initiative is rooted in a formal partnership between NAWASA and MWAG, established in 2025 through a Memorandum of Understanding (MOU). This collaboration underscores a shared commitment to encouraging Grenadian journalists to explore and report on issues related to water, climate change, and environmental sustainability, while recognizing excellence in the field.

At NAWASA, we believe that informed communities are empowered communities. By supporting high-quality environmental journalism, we contribute to building a more resilient and sustainable future. This award honors journalists whose work demonstrates excellence in research, storytelling, and public education on critical issues such as water resource management, climate adaptation, and sustainable development.

Ms. Mc Intyre's winning submission, a GIS-produced video on the progress of the Seven Sisters Pipeline Project stood out for its depth, clarity, and impact. The feature thoughtfully examined how the project has the potential to transform lives while strengthening climate resilience. Through strong narrative structure, careful selection of voices, and compelling storytelling, the production highlighted both the immediate and long-term significance of the initiative for community empowerment and sustainable development.

Her work exemplifies the values this award seeks to promote: informative, engaging, and transformative reporting that raises awareness, inspires action, and contributes meaningfully to national and regional conversations on sustainability.

Entries for the award were evaluated based on several key criteria, including:

- Relevance to water, climate change, and environmental sustainability
- Quality of research and accuracy of reporting
- Creativity and storytelling
- Community impact and public awareness
- Adherence to ethical journalism standards
- Originality of content
- Technical excellence in production or writing

NAWASA remains committed to supporting initiatives that celebrate and promote responsible environmental journalism and looks forward to the continued growth of this partnership with MWAG.
